**Sec. Acc. CPI :**

C1994-124822

**Title :**

Unsatd. polyurethane contg. 20-80 per cent polyethylene glycol units - useful as dispersants for the prodn. of aq. dispersions of hydrophobic alkyd resins, esp. in aq. paint compsns

**Derwent Classes :**

**Abstract :**

EP-613914 A

Unsatd. polyurethanes (UPU) (I) contg. 20-80 wt.% polyethylene glycol (PEG) units are prepd. by reaction of (a) polyisocyanate(s), (b) unsatd. fatty alcohol or a polyalkylene glycol ether thereof or the reaction prod. of an unsatd. fatty acid and a mono-epoxide, (c) a cpd. contg. two NCO-reactive gps. and ionic gp(s). or a structural element which can be converted into an ionic gp., (d) a polyalkylene glycol with mol.wt. 750-10000 and opt. (e) a cpd. with 3-6 OH or amino gps., with ratio (NCO gps. in a):(OH and amino gps. in b-3) = (0.7:1)-(1.2:1). Also claimed are aq. dispersions of (II) contg. UPU (I).

USE - Used as dispersants for the prodn. of aq. dispersions of hydrophobic alkyd resins (II) (claimed).

ADVANTAGE - Water-based alkyd resin paints contg. (I) as dispersant have better pigmentability, drying properties, water resistance and storage stability than prior-art systems, enabling the prodn. of highly pigmented gloss coatings. (Dwg.0/0)

**US Equiv. Abstract :**

US5466772 A

Unsatd. polyurethane contg. 20-80 wt.% of polyethylene glycol units, is prepd. by reacting (a) at least one organic polyisocyanate, (b) an unsatd. fatty alcohol or its polyalkylene glycol ether, an unsatd. fatty amine or a reaction prod. of an unsatd. fatty acid and a mono-epoxide, (c) a cpd. contg. not only two gps. which react with isocyanate gps. but also at least one gp. which is ionic or a structural element which can be converted into an ionic gp., (d) a polyalkylene glycol having a molecular mass of 750-10,000, and opt. (e) a cpd. contg. 3-6 hydroxyl or amino gps. The ratio of the isocyanate gps. in (a) to the hydroxyl and amino gps. in the remaining component is 0.7:1 to 1.2:1.

USE - Used as dispersants for alkyd resins. ((Dwg.0/0))
